in washroom services, waste management
and workplace solutions.

WASHROOMS

Professional Washroom Services offers a discreet efficient service

Air Fresheners

Air fresheners enhance the environment by providing subtle, uplifting fragrances. A choice of both aerosol and non-aerosol are available. Our fully automated units are available in a number of finishes to compliment your washroom style.

Air Purifying Systems

In enclosed spaces our air purification system removes embarrassing odours by treating the root cause. The benefit of this is that it provides a clean and fresh environment.

Baby Changing Facilities

A full range of baby changing equipment is available including baby change tables, table sanitisers and nappy disposal bins.

Feminine Hygiene

Our well designed feminine hygiene units come in 'a' range of colours, finishes and sizes. TWC has experienced staff that provide a reliable and discreet service which is tailored to your individual requirements.

Hand Drying

We have a variety of solutions available from paper hand towels to the very latest automatic hand driers. Our extensive range includes low power, fast drying, "hands in" and whisper quiet to name but a few. And of course, all are available in several colours and finishes to match your washroom.

Vending Services

Dual and multi vending machines provide the convenience of emergency provisions when employees, customers or guests need personal products urgently. The machines are regularly restocked and maintained by our staff.

Urinal Water Saving System

A urinal flush management system is designed to drastically reduce your water consumption by up to 90%. Eradicating unnecessary and expensive water wastage, the system ensures that as much water is saved as is possible without compromising hygiene standards.

Auto Sanitisers

Automated cleaning and hygiene systems which deodorise and destroy bacteria in urinals and toilets. Fully maintained by our staff they help keep your washroom smelling fresh.

Janitorial Supplies

TWC provide a full range of consumable products for all your business needs.

CLINICAL WASTE

Professional Clinical Waste Collection and Disposal Management Services

Sharps Disposal

Our sharps disposal service, in UN compliant containers, offers safe disposal of medical and non-medical sharps.

Nappy/Incontinence Waste Disposal

TWC provide external eurocarts in a variety of sizes, together with the provision of, waste bags, a duty of care certificate and regular collections tailored to your requirements.

Medical Waste Services

Our medical waste disposal service offers safe and compliant disposal of healthcare and non-healthcare swabs and dressings.

Mats

Plain and logo entrance mats, available in an extensive range of colours and sizes for both inside and outside. Mats are serviced on a regular basis to suit your requirements.

WORKPLACE SOLUTIONS

Professional Workplace Solutions offers a range of services

Commercial Carpet Cleaning

Our carpet or hard floor cleaning service provides superb results. Fast drying in under 20 minutes plus outstanding stain removal, this is a service that is hard to beat.

Water Dispensers

TWC supply both hot and cold mains fed water machines providing an instant and constant source of high quality drinking water in the workplace. The hot water machine facilitates the making of hot drinks without the need to boil a kettle. Also supplied are bottled water coolers where a water supply source is not available. All machines are maintained by our qualified technicians.

Confidential Waste

Secure, confidential waste collection and document shredding service. We deliver 'peace of mind' to our customers in the knowledge that their confidential waste is destroyed by a security vetted, highly professional team with the tightest security standards.

First Aid Kit

Compliant first aid kits and eye wash stations plus all refills as and when required with this hassle free service.

ANTIMICROBIAL CARPET/ NON SLIP FLOOR CLEANING

TWC offers a revolutionary system for cleaning and sanitising carpets and non slip flooring. The system provides superior cleaning, infection protection and control in one application.

Using the most advanced technology available the product is the first of its type to mix a high grade, non toxic cleaner with a broad spectrum disinfectant. The result is an outstanding cleaner that sanitises as it cleans. This exceptional cleaner, combined

with the use of microfiber and a slow speed rotary machine, creates a system that cleans the most difficult and soiled surfaces to the highest standard.

The qualities of the product and service include:

- Environmentally friendly – biodegradable in just 7 days
- Antimicrobial qualities – kills 99.9% of known infections
- Extremely safe – non-hazardous, non-flammable, non-toxic and non-caustic
- Superb cleaning results
- Fast Drying (within 20 minutes) with very little water consumption
- Stain removal of even the most stubborn stains
- Deep cleans non-slip floor surfaces back to non-slip (Altro approved)

healthier workspace?**

AIRsteril

TWC guarantees to eliminate offensive odours and control infections without the use of chemicals and filters.

AIRsteril

Offensive odours are created by bacteria and volatile organic compounds (VOCs) found in the air. Many infections and viruses are spread by aerosol processes. Moulds and fungi are also carried in the air, damaging buildings and causing respiratory complaints. What's more, bacteria, viruses, moulds and fungi carried in contaminated air, are deposited on exposed surfaces making enclosed rooms very unhygienic for most people. Standard cleaning procedures only offer temporary solutions. As soon as an area is cleaned and then re-used, bacteria return and grow at a rapid rate bringing the smells back until the next cleaning session. Fragrances use chemicals to mask odours

– they do not remove the causes of the odours. Our units recreate mountain fresh air wherever they operate eliminating the need for masking agents and perfumes.

AIRsteril is an innovative technology which guarantees to eliminate odours and control

infections in all enclosed spaces without the use of chemicals or filters. It does this by killing bacteria, viruses, moulds and fungi found in the air and on exposed surfaces. This way you clean the air and all surfaces 24 hours a day, 7 days a week, 365 days a year.

By installing AIRsteril in any size enclosed space you will:

- Eradicate offensive odours
- Control infections and improve healthcare
- Improve overall environment for staff, visitors, residents and customers
- Enhance your public image
- Cut cleaning costs
- Cut contamination down time
- Reduce staff absenteeism
- Comply with regulations

**Eliminate Offensive Odours
and Control Infections**

USES FOR AIRsteril

Healthcare and Care Homes:

One of the difficulties with having residents living in close proximity with low immunity is the vulnerability to infection and the odours from incontinence or medical conditions. Poor ventilation, air quality and personal hygiene issues add to the problems. We have suitable units specific to the needs of the following areas: Silent units for bedrooms that are portable, specialist units for sluice rooms and stylish units for reception, lounge and corridor areas.

Nurseries:

One of the major complaints of parents whose children have recently started nursery is the number of ailments they pick up and in turn bring home and pass on to the rest of the family. In these situations, the nursery is in fact acting as an infection distribution center.

Food Production Areas:

Within the food industry there are a number of issues that can make it difficult for companies to ensure that offensive odours don't occur. Staff changing rooms storing a large amount of clothing, including trainers, not being able to use air fresheners, overpowering cooking odours and general odours from washrooms.

Hotels:

Odours from smoking in rooms, visitor illness, previous leaks or cooking smells can stop rooms being rented out or create customer complaints.

Gyms and Leisure Clubs:

Locker and changing areas suffer odour issues due to sweaty clothing, gyms, work out rooms, saunas and steam rooms all suffer odour and bacteria problems.

Waiting Rooms:

Risk of cross infection from multiple individuals in doctors and dentists or odour issues from animals in vets.

Offices:

Odour issues from catering or multiple individuals, risk of the spread of infection which can lead to absenteeism from work. A trial in an NHS call centre showed over a 42% reduction in staff absenteeism. If you would like to see a copy of this report please get in touch.

By installing AIRsteril into these areas they are changed from infection distribution areas to an infection control center as it controls bacteria and viruses in the air and on all exposed surfaces.

In September 2009 the Health Protection Agency's laboratories at Porton Down performed efficacy testing of the AIRsteril MP20 Unit's ability to reduce airbourne and surface microbial contamination.

The tests showed a reduction of airborne microorganisms of up to 98.11% within five minutes of exposure and a reduction of surface contamination up to 59.47% in one hour, the surface tests included MRSA.

The full HPA report is available free of charge on request.

INFECTION CONTROL SYSTEMS

With TWC not only will you eradicate odours and improve infection control you will cut operating costs

Bio-Fogging

Bio-Fogging is a well proven, safe, deep sterilisation process that is a recommended procedure to rid the air of background build up of pathogens and pollutants.

The fogging process completely cleanses the air and surfaces within the building by using a high velocity jet of vaporisation to reach every corner and surface of the premises and can even sanitise congested features such as cupboards and shelves.

The bio-fogging process is acknowledged as being the most effective method for sterilising multi-surface enclosed environments and is equally effective on hard and soft surfaces.

In addition to its sanitising properties, the fogging regime serves to freshen and de-odorise the premises.

The active ingredient in the fogging solution is stabilised Chlorine Dioxide which is effective against a broad spectrum of pathogens.

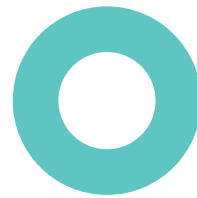

The bio-fogging machine

You can be assured that the premises are cleansed to the highest standard, including the air, with this simple process.

Prevent the spread of infections such as Norovirus, Influenza and the common cold to name a few of the outbreaks that commonly occur and spread within closed space.
